

Live Video Experience

no-compromise live-streaming of semi-interactive trainings in Full-HD

ABOUT

Live Video Experience (LiVE) is an *Open Source Software* solution for live-streaming semi-interactive trainings in Full-HD video quality. It consists of three particular components: a single trainer-side (*LiVE Sender*), a central relay networking service (*LiVE Relay*) and multiple decentralized trainee-sides (*LiVE Receiver*).

PREPARATION

In order to participate in a *LiVE* training session as a trainee, please download, unpack and execute the *LiVE Receiver* application for *Windows* (x64) or *macOS* (x64) systems from <https://video-experience.live/>. A local installation is intentionally not required.

SETTINGS (one-time)

On the first use of *LiVE Receiver*, please use the *Settings* dialog to set your portrait picture and full name, and configure your audio input (microphone) and audio output (speaker or headphone) devices. Your settings will be remembered for all subsequent uses.

CONNECTION

On the *Connection* dialog, now enter the *LiVE Relay Server* (usually a hostname like `live.example.com`) and the *LiVE Access Token* (usually a closed-group shared secret like `engelschall-XXXX-YYYY`) you have received from the trainer in order to connect to the particular training session.

PARTICIPATION

During the training session you can control your audio volume (top-left), resize your window (top-right), view the video stream of the trainer (middle-center), send audio and/or text messages or votes to the trainer (bottom-left), or share your emotions, challenge and mood (bottom-right).

Enjoy the training experience!
